

Activate Alex Robot in three steps

- 1 INSTALLATION OF PERIMETER WIRE**
(no visible wire, no need to dig up the garden)
- 2 STATION POSITIONING**
(Alex will return to the charging station in case of low battery or rain)
- 3 PROGRAMMING**
(easy programming equipped with a simple manual)

HERE'S WHY ALEX IS YOUR GARDEN FRIEND

A GREEN AND WELL-MANICURED LAWN. The duration and quality of a lawn depends on the cutting. The natural reuse of lawn clippings (e.g. MULCHING* effect) increases a lawn's resistance to diseases, drought and insects. Furthermore, the more frequent the cutting, the lower the stress to the lawn which improves its appearance. Alex is recommended for gardens up to 250m².

SAVING OF TIME. You no longer have to push the lawnmower, to collect the grass, put it into bags and throw it way. **More free time.**

SAVING OF MONEY. **Less fertiliser** because the grass clippings provide about ¼ of the annual requirement. **Less water** because the lawn clippings cover around 80% of the requirement.

ECO-FRIENDLY. No need to collect the grass and put it into bags. **Grass recycling.**

EASY. Installation and maintenance are simple; the robot is easy to operate via an user-friendly display that makes programming easy. **It does it all.**

INTELLIGENT. Detects obstacles. **Returns to the charging station when battery is low.** Also works in the rain, but can return to the station (by activating the special "rain sensor" function).

SILENT. Makes no noise. **Therefore, it can work during the day or night.**

POWERFUL. **Can handle slopes of up to 45%.** It can manage any shape of garden.

DESIGN and STYLE. **Italian technology and design of the highest quality** for your garden.

Best of all its:
SAFE.

The robot features a NEW and EXCLUSIVE SAFE BLADE SYSTEM that recognises the grass (and only cuts grass). An intelligent blade that perfectly cuts only the grass surface thanks to the unique and innovative shape of the blade. And if it is lifted, the blade stops. No problem with Alex in your garden.

SAFE BLADE

TECHNICAL DATA

Max. cutting area (-20%) *	500
Cutting height (mm)	20-60
Manageable slopes (%)	45%
Maximum slope (%)	35%
Max. slope next to edge (%)	20%
Areas managed	2
Cutting disc (cm)	25 (patented safe blade)
Noise level - dB(A)	72-65
Motor type	Brushed
Ground speed (m/min)	25
Lithium-ion battery (25 Volts)	2.3Ah
Recharging Mode	Automatic
Charging station	<input checked="" type="checkbox"/>
Avg. working time +-20%	0:40
Display	<input checked="" type="checkbox"/>
Safety lifting handle	<input checked="" type="checkbox"/>
Rain sensor	<input checked="" type="checkbox"/>
Bluetooth console	<input type="checkbox"/>
PIN code alarm	<input checked="" type="checkbox"/>
Perimeter wire length (m)	100
Fastening pegs	100
Robot weight - incl. batteries (kg)	9,5

STANDARD EQUIPMENT OPTIONAL

***Do you know what grass recycling means? MULCHING effect**

Mulching is the natural reuse of grass clippings. The grass left on the lawn at the time of mowing decomposes rapidly, releasing about 80% of water as well as nutrients into the soil.
